

Sustained Low Score Pattern Alert — Neolokal

Reporting Period: March 1–30, 2026 · Based on Daily Pulse check-in data

⚠ FOR MANAGEMENT & LEADERSHIP EYES ONLY

This document identifies periods of **3 or more consecutive days** where low scores (1 or 2 out of 5) were recorded within the same area (FOH or BOH) with the reason attributed to **professional / work-related causes**. Each alert represents a distinct, non-overlapping period of sustained strain.

Because responses are anonymous, patterns cannot be attributed to a specific individual. They reflect a collective signal from the team in that area across those days. **A direct conversation with the relevant team lead is recommended for all alerts in this document.**

-  **Red pills = dimension flagged consistently across every day in the alert period**
-  **Grey pills = dimension affected on some but not all days**

FRONT OF HOUSE (FOH) · N=123 RESPONSES

3 CONSECUTIVE DAYS Wednesday Mar 4 → Friday Mar 6

Week 2 · Mar 3–7

DAY	DIMENSIONS FLAGGED WITH PROFESSIONAL REASONS
Wed Mar 4	Physical Mental
Thu Mar 5	Recovery
Fri Mar 6	Physical Mental Emotional Recovery Work Environment

CONSISTENT EVERY DAY: *No single dimension was flagged across all three days*

While no single dimension was consistently flagged across all three days, **all five dimensions were collectively affected across the window**, with Friday Mar 6 showing the broadest single-day signal in the Neolokal dataset — all five dimensions flagged simultaneously with professional reasons. The pattern builds across the three days, with Mar 6 representing a significant peak. This aligns with the broader Friday low-score pattern identified across the full dataset and warrants a conversation with FOH leadership about what was happening during this specific week.

BACK OF HOUSE (BOH) · N=49 RESPONSES

✓ **No 3+ consecutive day patterns identified in BOH.** With 49 responses across the period, this conclusion carries meaningful weight — BOH participation at Neolokal is sufficient to state with reasonable confidence that no sustained consecutive professional strain pattern existed in this area during the reporting period.

📌 **Worth noting:** Friday Mar 6 saw **all five dimensions flagged with professional reasons in BOH on a single day**. While this does not meet the consecutive-day threshold, it reinforces the Friday pattern seen across both FOH and BOH and is worth raising with kitchen leadership as part of any broader Friday-focused conversation.

Overall Assessment — Neolokal

One red alert was identified — a **3-day FOH pattern during Week 2 (Mar 4-6)**, culminating in Mar 6 where all five dimensions were flagged simultaneously with professional reasons. This is the most concentrated professional strain signal in the Neolokal data for this period.

Neolokal's overall alert picture is significantly lighter than some venues at this stage of the programme. No BOH consecutive patterns were found, and FOH patterns outside of the Week 2 alert were isolated single-day events rather than sustained runs. This is consistent with Neolokal's higher baseline scores and suggests a generally more stable team environment.

The Friday pattern is the most consistent structural signal in this data — appearing in both FOH and BOH as individual high-alert days. This is worth a separate operational conversation about whether Friday-specific factors (service load, staffing levels, or shift sequencing) can be adjusted to reduce end-of-week strain.

Recommended action: Discuss the Week 2 (Mar 4-6) operational conditions with FOH leadership, with particular attention to what drove the peak on Mar 6. Separately, explore whether there are structural changes that could reduce Friday-specific pressure for both FOH and BOH teams going forward.
